Our Proven Process

1

SURFACE PREPARATION

The concrete is ground or shot blasted to create the ideal surface for coating adhesion. All equipment is connected to HEPA vacuum systems to minimize dust.

2

CONCRETE REPAIRS

Cracks, pits, and surface imperfections are repaired to create a smooth, uniform surface before coating begins.

3

POLYUREA BASE COAT

A 100% solids, self-priming polyurea base coat is mixed and applied to create a strong, durable foundation for the coating system.

4

DECORATIVE FLAKE

Decorative vinyl flakes are broadcast into the wet base coat to 100% coverage, adding texture, durability, and visual appeal.

5

FLAKE SCRAPE

Once the base coat has fully cured, excess flake material is scraped and vacuumed to remove loose or vertical flakes.

6

CLEAR TOPCOAT

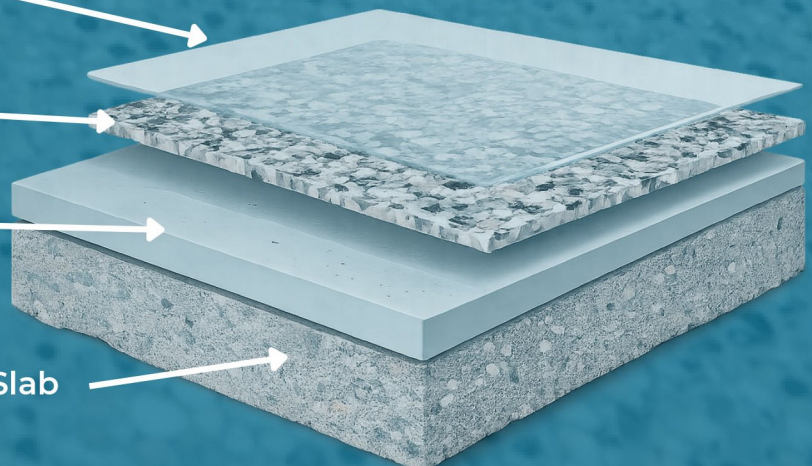

A UV-stable polyaspartic clear coat is rolled on to seal the system and deliver a durable, long-lasting finish.

Concrete Slab

Polyurea vs. Epoxy Coatings

Polyurea Floor Coatings Hard Shell Coatings' professional-grade system

- Ready for use in hours (often same day)
- Stronger bond to concrete
- Flexible—moves with your slab
- UV-stable (won't yellow or fade)
- Handles moisture better
- Long-lasting durability (15–20+ years)

Epoxy Floor Coatings Traditional

OTHER COMPANIES

- Takes multiple days to fully cure
- Rigid material that may crack over time
- Can yellow or fade with sunlight
- Shorter lifespan (typically 5–10 years)
